

# Asset Data Collection

Digital asset tagging puts you in control of your maintenance plan.

## TIME IS MONEY

When procuring new equipment, the decision is based on the life cycle of the asset. The goal is to minimize costs, maximize the life of the asset, increase efficiency of the unit and improve safety performance.

## WHY ASSET TAGGING?

Without asset tagging, your equipment is at risk of unscheduled downtime, additional costs and shorter lifespans.

## HOW BFC CAN HELP

Our trained technicians will inspect all the equipment you have installed at each of your sites nationwide.

Asset data collection collects your equipment:

- **Make**
- **Model**
- **Serial Number**

We compile all this information into a report so that you have the information you need to make informed decisions about energy efficiency, maintenance, and repairs.
